

Small Business Cybersecurity Webinar Series - Project Proposal

What This Is All About

Cybersecurity can be a confusing space for many small business owners, especially when tech jargon and threats seem overwhelming. That's why we're launching the Small Business Cybersecurity Webinar Series — a two-day virtual Zoom event that breaks things down into clear, useful steps. It's all about giving entrepreneurs and small business teams the tools they need to protect their digital assets and build lasting digital confidence.

What We're Aiming For

- Host two interactive Zoom webinars on March 22 and 23, 2025.
- Reach at least 1,200 small business owners, startups, and entrepreneurs.
- Share downloadable cybersecurity toolkits, checklists, and follow-up resources.

These goals help strengthen the broader mission: making cybersecurity easier to understand and act on for every business owner.

How We'll Do It

- Live webinars led by trusted cybersecurity experts, covering real-world topics like password security, threat prevention, and data protection.
- Open Q&A sessions where attendees can ask questions and get direct, useful advice.
- Extra tools and resources like checklists and how-to guides.
- Partnering with chambers of commerce and business networks to spread the word and reach more business owners.

Key Phases & Tasks

Week 1 – Planning: Finalize webinar topics, confirm expert speakers, and prep logistics.

Week 2 – Preparation: Build presentations and toolkits.

Week 3 – Promotion: Share event info through local business communities and online groups.

Week 4 – Event Delivery: Host both webinars, provide tech support, and collect feedback.

Week 4 – Follow-Up: Review survey feedback, analyze data, and wrap it all up in a final report.

Implementation Plan

Each step of the project is broken into four key weeks:

- Week 1: Choose the right cybersecurity topics and lock in our expert speakers.
- Week 2: Finalize content, tech setup, and assemble resource kits.
- Week 3: Get the word out with digital flyers and posts via business groups.
- Week 4: Deliver the events, support attendees, and collect insights for future planning.

Budget & Resources

- Speaker Fees: \$150/day for 2 experts = \$300
- Zoom Platform: \$100 for secure, pro-level hosting
- Equipment (AV/Lighting if needed): \$50
- Digital Flyers & Promotion: \$50

****Total Budget: \$500 CAD****

This budget makes sure we deliver expert content, accessible resources, and strong outreach — all within a simple and cost-effective setup.

How We'll Measure Success

- Track attendance and webinar registration numbers.
- Monitor engagement through Q&A activity and toolkit downloads.
- Gather post-event feedback via surveys to rate the quality and usefulness of content.
- Wrap it all up in a final project report that highlights participation, feedback, and budget use.

Final Thoughts

The Small Business Cybersecurity Webinar Series gives small business owners the chance to learn simple, impactful steps to protect their digital world. With easy-to-understand sessions, downloadable resources, and expert advice, this project creates long-term value for business owners looking to stay safe, secure, and confident online.
