MAKING SOIL

Meet Geme,
our new
composter!

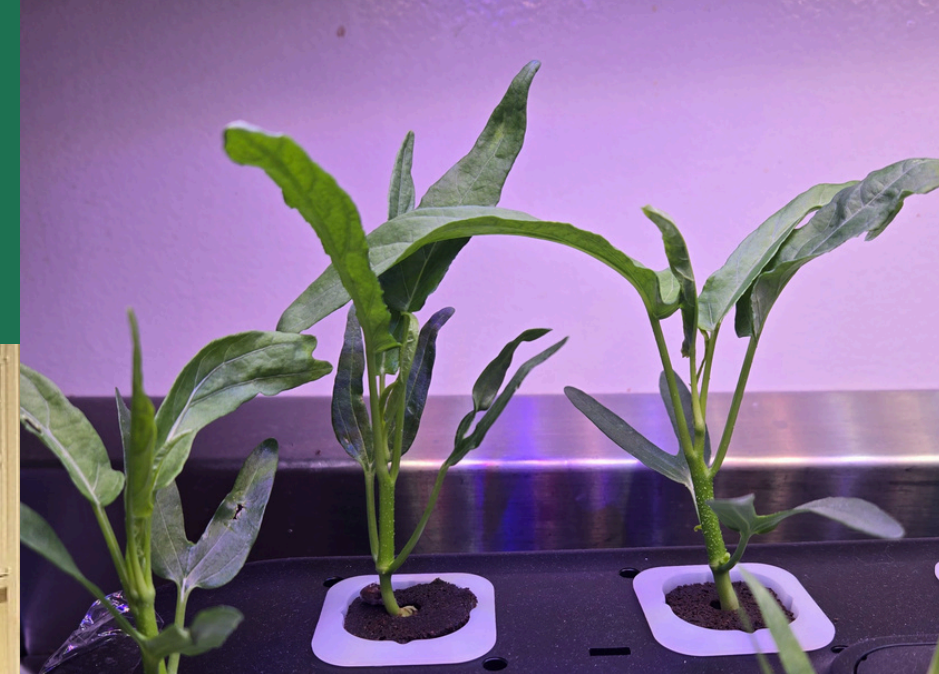

MUSK OX RAVIOLLI

Utilizing spring onions that
we grew to garnish our
dishes

This project equips youth with the knowledge and skills to improve local food resilience while fostering a deeper connection to environmental stewardship. By integrating digital tools and civic engagement, it encourages youth leadership in sustainability, aligning with CANConnect and the GLOCAL Foundation's goals of mobilizing civic knowledge and empowering young Canadians to create meaningful change.

WE SERVE FOOD FOR THE WHOLE SCHOOL TWICE A WEEK!

Aira's class is learning how to grow microgreens, implement hydroponic systems, and develop composting solutions to address food insecurity and sustainability in the Arctic. Through the generous support of CANConnect Micro-grants for Empowering Canadian Youth in Digital Civic Leadership and Service, students are gaining hands-on experience with innovative food production methods that reduce reliance on costly, imported goods.

A LOT OF IT!

The microgreens and sprouts grown by students are incorporated into the school's lunch program, benefiting the entire school community and contributing to a healthier, locally sourced food system. This initiative embodies Qanuqtuurniq—the Inuit Qaujima jatugangit (IQ) principle of being innovative and resourceful—by encouraging students to find creative solutions to local food challenges using technology and sustainable practices.

CANConnect Micro-grants for Empowering Canadian Youth in Digital Civic Leadership and Service supports the sustainability of our school lunch program at Inuksuk High School

PLANTS AND PEOPLE
ለጾቃዊነት ለሕይወት

Plants provide
